Swiss Life Flex Fds CH Dyn Allo CHF H I

Risk indicator (SRI)

Investment strategy

This global investment fund aims to profit from positive and - for stock and bond markets - negative market trends. To this end, different stock, bond and commodities markets are continuously monitored. Once a positive trend materialises, the fund invests in it. If negative trends can be identified in the equity or bond markets, they can be exploited by adopting a selling position. The fund follows an absolute return strategy and thus aims for a positive return over the midto long term. Please note that the fund may have an equity holding of up to 80% when the equity markets are rising globally and, as a result, may experience significantly higher volatility levels (at least temporarily) than a conservative traditionally managed portfolio fund. Foreign currency risks are at least 90% hedged against the Swiss franc.

Master data
